

TCR Cars – Maximum Weight

With the present document WSC reminds that for safety reasons, the imposed maximum limit of weight acceptable for a running TCR car (with fuel, driver and any ballast) is 1415 kg.

Under no circumstances, the application of combined factors from the technical (including CW and BoP) and the sporting regulation may allow cars to overtake this limit.

It is mandatory for WSC that this safety condition is respected. If failing on respecting this condition, the Promoter will be directly the full and only responsible for any consequence.

Best regards
